IDENTIFIERS

ABSTRACT,

Information on employment in Missourf's public colleges and universities from 1979 to 1983 is presented, based on data reported on the Higher Education Staff Information Survey. Comparisons are made over the 4-year period in total employment, employment among the seven Equal Employment Opportunity Commission categories of staff, and growth or decline in the employment of women and minorities. The comparisons are presented by sector of public higher education, and detailed tabulations of the data by campus are appended. The Missouri public higher education data is also compared to national higher education employment data. The data on the employment of women and minorities is presented for the University of Missouri, the state four-year institutions, and the state two-year institutions, and covers the following personnel categories: executive, administrative, and managerial positions, professional nonfaculty positions, faculty, secretarial and clerical employees, technical and paraprofessional employees, skilled craft employees, and service and maintenance employees. For each institution, data for 1979, 1981, and 1983 is provided on nonfaculty full-time employees by race and sex and on faculty employees by race and sex. The Higher Education Staff Information Survey questionnaire is appended. (SW)

Foreword

The Coordinating Board for Higher Education has statutory responsibility to collect and examine data submitted by Missouri colleges and universities. The following report is an overview of employment in Missouri higher education focusing on trends in employment in the seven categories identified by the Equal Employment Opportunity Commission. A later report will examine the effect of these trends on total compensation expenditures.

Shaila R. Aery Commissioner of Higher Education

EXECUTIVE SUMMARY

This report presents information on employment in Missouri's public colleges and universities for the period from 1979 to 1983. Comparisons are made over the four year period in total employment, employment among the seven Equal Employment Opportunity Commission categories of staff, and growth or decline in the employment of women and minorities. The comparisons in the body of the report are presented by sector of public higher education but detailed tabulations of the data by campus are available in the Appendix of the report.

Total employment across all sectors of Missouri public higher education increased by only 88 positions between 1979 and 1983, from 19,320 to 19,408. There were significant reductions (17 percent) in the number of maintenance staff during this period and reductions of one to two percent in most other categories of nonprofessional support staff. Faculty, the largest higher education employment category, increased through 1981 and then declined to a level of 1.5 percent above the 1979 level. The only categories of public higher education employment experiencing significant growth were executive and managerial staff (15 percent increase) and professional support staff (14 percent growth).

In general, the number of women and minorities employed in Missouri public higher education grew more rapidly over the four year period than did total employment. The greatest proportional gains for women were made in the fastest growing categories of executive, administrative, and managerial and professional nonfaculty positions. For minorities the largest absolute growth was mong the faculty; proportionately significant gains were made among executive, administrative, and managerial staff and among professional nonfaculty positions.

Starting on page 29, the Missouri public higher education data are compared/to national higher education employment data. While the employment of women and minorities in Missouri public higher education in all types of positions lags the national profile slightly, the differences are more significant among professional positions, particularly for minorities.

NOTES ON DATA

The following report was compiled from data reported by public colleges and universities on the Higher-Education Staff Information Survey (EEO-6 report) of the U.S. Equal Employment Opportunity Commission. Institutions were asked to report on all full-time employees for the payroll period nearest October 1 of the reporting year, independent of funding source.

Significant differences may exist between the number of employees recorded in this report and other reports on college and university employment. This report describes only full-time employees. The number of faculty recorded on this report is generally greater than the number described on the Higher Education General Information Survey (HEGIS) because the HEGIS data are limited to instructional faculty whose major or regular assignment is instruction while the data reported here include all full-time faculty.

This report does not include Lincoln University because the institution has not submitted the 1983 data or Moberly Area Junior College because of incomplete data for 1979. It is important to note that the data in this report are grouped by sector to provide a broad statewide perspective. There are, of course, very significant variations among campuses within sectors and the reader's attention is drawn to the appendices of the report where more detailed descriptions are available.

TOTAL EMPLOYMENT BY SECTOR AND CATEGORY

Total Employment By Sector

Between 1979 and 1983 total employment across all sectors of Missouri public higher education increased less than one percent. As illustrated in Figure 1, total full-time employment at the University of Missouri increased through 1981 and then declined to about the same level as in 1979. The four-year sector reduced total employees by 134, while the two-year sector, which was experiencing significant enrollment increase at that time, increased total full-time employees by 184.

FIGURE 1. TOTAL FULL-TIME EMPLOYEES BY SECTOR 1979, 1981 AND 1983

Total Employment By Category

During the 1979 to 1983 period there were significant variations in statewide trends in employment by gategories. Generally, the direction of these trends held true across the sectors, though there, were differences which will be discussed in later sections of this report. The variations by category of employment are significant because they indicate a significant increase in the number of employees in relatively higher paying positions and a decrease in relatively lower paid positions. Similarly, the trends suggest that, statewide, institutions experienced an increased executive, administrative, and managerial emphasis while maintenance and clerical support functions were reduced.

Employees classified on the EEO-6 report as executive, administrative or managerial staff increased statewide between 1979 and 1983 by fifteen percent. As illustrated in Figure 2, this is the second smallest group of employees on the campuses, but the fastest growing with an increase of 166 over the four year period reported. This category includes such titles as president, vice-president, dean, or director, as well as subordinate titles such as assistant dean if the primary responsibility is administrative.

EXEC NON-FAC FACULTY CLERICAL TECHNICAL SKILLED MAINT

-4.

Professional non-faculty employees increased by fourteen percent statewide, growing by 258 staff members. This is somewhat a catch-all category of employment generally including all those positions requiring college education but which do not involve teaching or the exercise of independent discretion on matters of policy. Examples of positions in this category would include budget analysts and programmer/analysts.

Faculty, by far the largest group of college and university employees, grew by 1.5 percent statewide between 1979 and 1983. As might be expected, the total number of faculty seemed to respond most directly to enrollments, with a peak being reached in 1981 and a slight decline by 1983.

The number of nonprofessional support staff declined in all categories, but to varying extents. The number of secretarial or clerical staff declined by two percent as did the number of technical and paraprofessional employees. Skilled crafts personnel, the smallest employment category, declined by just over one percent.

The most dramatic reduction in staff among the colleges and universities was in the least skilled category of maintenance personnel, where there was a seventeen percent state—wide reduction. As will be seen later, this trend varied considerably with the two-year colleges increasing maintenance personnel slightly while the four-year sector reduced such staff by nearly 40 percent. One will note in the appendices that the major reduction in the four-year sector was concentrated at three campuses and that at least one of these campuses had clearly employed excessive maintenance personnel in 1979.

Summary

In summary, the statewide data indicate that total employment and the number of faculty has been essentially static during the four years examined while there has been some shift from nonprofessional support staff to professional staff. In a later report, the Coordinating Board staff will examine the effects on total compensation expenditures of this realignment of personnel.

FIGURE 3. FULL-TIME EMPLOYEES BY CATEGORY

EMPLOYMENT OF WOMEN AND MINORITIES

During the 1979 to 1983 period, when total statewide employment in public higher education grew by about one percent, total employment of women and of minorities increased slightly faster. For women the statewide difference was minimal at 1.4 percent overall growth. By 1983 women comprised 46.4 percent of the total Missouri public higher education workforce. Total minority employment grew at about six percent and reached 11.6 percent of total public higher education employment, which is essentially the same percentage as nonwhites represented in Missouri's 1980 Census. (Missouri Population and Census Newsletter, August 1983, page 2.)

-6-

However, trends varied widely by sector and by employment category. In general, the data would suggest that the public colleges and universities have made concerted and relatively successful efforts to address equal opportunity goals where there has been significant new hiring. There are also some examples of apparent efforts to address these goals where significant layoffs have occurred. However, there are notable exceptions to both these generalizations which will be noted in the following description of trends within employment categories and sectors of higher education.

In the following section the trends in total employment, in employment of women, and in employment of minorities will be described in each personnel classification and by sector. It is important to note that the total columns to the left of each graph include women and minorities and the figures describing trends in the employment of women include minority, women. It should also be noted again that the trends vary considerably by campus within sector.

University of Missouri

At the University of Missouri's four campuses and central administration the number of executive, administrative, and managerial staff increased by 78 positions over the four years. There was a net increase of 59 women employed in these positions and a net increase of 40 minority positions. By 1983 women represented about 26 percent of this group while minorities accounted for about five percent.

FIGURE 4. EXEC/ADMIN/MANAGERIAL, WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

At the state four-year colleges and universities total executive, administrative, and managerial employees increased by 80. There was a net increase of 56 women and of nine minorities. By 1983 women represented 27 percent of this group and five percent were minorities,

FIGURE 5. EXEC/ADMIN/MANAGERIAL, WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

State Two-year

In the state two-year sector executive, administrative, and managerial employees increased by 8 during the four year period. The number of women increased by 16, while the number of minorities was unchanged. By 1983, women comprised 28 percent of this group while minorities constituted 13 percent.

FIGURE 6. EXEC/ADMIN/MANAGERIAL, WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983

PROFESSIONAL NONFACULTY STAFF.

University of Missouri

At the University of Missouri professional nonfaculty positions grew by 178 over the four years. There was a net increase of 211 women and the number of minorities in this group increased by 21. By 1983 women represented 64 percent of this group while six percent were minorities.

FIGURE 7: PROF NONFACULTY, WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

In the state four-year sector, the number of professional nonfaculty positions increased through 1981 and then declined for a net increase over the four year period of 14 positions. The number of women increased by six positions while the number of minorities declined by one. By 1983 women represented 51 percent of these staff while minorities were five percent of the group.

FIGURE 8. PROF NONFACULTY, WOMEN AND MINORITIES \$TATE FOUR YEAR 1979, 1981 AND 1983

State Two-year

In the state two-year sector the number of professional nonfaculty staff increased by 66. The number of women increased by 55 and the number of minorities increased by 18. This brought the representation of women and minorities in this group to 62 percent and 13 percent respectively by 1983.

FIGURE 9- PROF NONFACULTY, WOMEN AND MINORITIES
STATE TWO-YEAR 1979, 1981 AND 1983

FACULTY

University of Missouri

At the University of Missouri the total number of faculty increased through 1981 and then declined for a net gain of only 63 positions. Women faculty members and minority faculty members increased at about the same rate as total faculty, with the number of women increasing by 45 and the number of minorities increasing by 58. However, these gains brought the percentage of women in the faculty to only 24 percent and the percentage of minorities to nine percent. It should also be noted that roughly half the minority members of the University of Missouri faculty are of Asian or Pacific Islander heritage. While this minority group is a very small portion of the state's population, national studies would suggest they represent a disproportionately high number of PhD recipients in growing fields like engineering and computer science.

FIGURE 10. FACULTY, WOMEN AND MINORITIES, UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

In the state four-year sector the total number of faculty increased by 48 positions between 1979 and 1983. The number of women increased by 12 while the number of minority faculty increased by 20.1By 1983 women comprised 27 percent of the faculty and minorities 3.8 percent. As at the University of Missouri, roughly half the minority faculty were of Asian or Pacific Islander heritage.

FIGURE 11. FACULTY, WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

State Two-year

Total faculty positions at the state two-year colleges decreased by three positions over the four year period. The number of women remained constant and the number, of minority members dropped by one. The percentages of women and minorities in the community college faculty were 38 percent and nine percent respectively.

FIGURE 12. FACULTY, WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983.

SECRETARIAL AND CLERICAL EMPLOYEES

University of Missouri

Secretarial and clerical positions at the University of Missouri were reduced by 72 over the four year period. The number of men increased by 21, making this category slightly less predominantly female at 95 percent. The number of minority clerical employees increased by 72, bringing the minority percentage to 13 percent.

FIGURE 13. SEC/CLERICAL, WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

At the state four-year institutions the number of secretarial and clerical employees increased by 22. The number of men increased by 15 while minorities increased by 14. This brought the percentage of minorities in this group to about five percent.

FIGURE 14. SEC/CLERICAL, WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

State Two-year

In the state two-year sector the number of secretarial and clerical staff was reduced by 28. The number of men declined by six and the number of minorities declined by 14. However, this left minority representation at eighteen percent of this category.

FIGURE 15. SEC/CLERICAL, WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983

TECHNICAL AND PARAPROFESSIONAL EMPLOYEES

University of Missouri

The number of technical and paraprofessional employees at the University of Missouri was reduced by 20 over the four year period. The number of women in this group was reduced by six while the number of minorities increased by 22. This brought the percentage of women in 1983 to 56 percent and the percentage of minorities to 11.6 percent.

FIGURE 16. TECH/PARAPROF., WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

In the state four-year sector the number of technical and paraprofessional staff increased by 51. The number of women increased by 33 while the number of minorities remained unchanged at four. This brought the respective percentages for women and minorities to 54 percent and two percent for 1983.

FIGURE 17. TECH/PARAPROF., WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

State Two-year

In the state two-year sector the number of technical and paraprofessional staff increased rather sharply for a gain of 126 staff. Women experienced a net gain of 95 positions, bringing their representation to 68 percent of this group. Minorities increased by 17 which brought them to 15.5 percent of this group.

FIGURE 18. TECH/PARAPROF., WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983

SKILLED CRAFT EMPLOYEES

All Sectors -

In all three sectors of public higher education the skilled crafts employees remained fairly stable in numbers, with a four percent decrease at the University of Missouri and small increases in the other two sectors. The number of women and minorities in this category also remained fairly stable, except in the two-year sector where the number of women declined considerably. The percentage of both women and minorities was rather small in both sectors, except for the percentage of minorities in the two-year sector.

FIGURE 19. SKILLED CRAFT, WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

FIGURE 20. SKILLED CRAFT, WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

FIGURE 21. SKILLED CRAFT, WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983

ZZ 1979

SERVICE AND MAINTENANCE EMPLOYEES

University of Missouri

Over the four year period the University of Missouri reduced service and maintenance staff by 166. Women in this category experienced a net loss of 48 positions and minorities also experienced a loss of 48 positions. Because of the significant reduction in total service and maintenance staff, however, minorities increased very slightly as a percentage of the total. By 1983 women were 38 percent of the total and minorities were 41 percent.

FIGURE 22. SERVICE/MAINT., WOMEN AND MINORITIES UNIVERSITY OF MISSOURI 1979, 1981 AND 1983

State Four-year

The most significant reduction in staff between 1979 and 1983 occurred in service and maintenance employees at the state four-year colleges and universities. The total was reduced by amployees or 39 percent. As was noted earlier, however, this net reduction was largely due to three campuses which made major reductions, particularly Central Missouri State University which reduced service and maintenance employees from 379 to 121. With the reduction, the service and maintenance staff at Central reached a size comparable to those at similar size institutions.

The number of positions filled by women in this group was reduced by 292 while the number filled by minorities was reduced by 62. The percentage of women in the remaining total fell from 49 percent to 28 percent while the percentage of minorities decreased from 11 percent to eight percent.

FIGURE 23. SERVICE/MAINT., WOMEN AND MINORITIES STATE FOUR-YEAR 1979, 1981 AND 1983

BEST COPY

34

State Two-year

In the state two-year sector the number of service and maintenance employees increased by 14 between 1979 and 1983. The number of women increased by 12 and the number of minorities decreased by three. This brought, the percentage of women in this group to 28 percent and the percentage of minorities to 40 percent.

FIGURE 24. SERVICE/MAINT., WOMEN AND MINORITIES STATE TWO-YEAR 1979, 1981 AND 1983

COMPARISON TO NATIONAL EMPLOYMENT IN HIGHER EDUCATION

In order to provide some perspective for viewing Missouri's higher education employment data, the following comparison to national aggregate higher education data was compiled. The national data was obtained from the U.S. Equal Employment Opportunity Commission report Minorities and Women in Institutions of Higher Education, 1979. Unfortunately, the 1979 data are the most recent available on the national level, so it was not possible to compare trends over the time period addressed in this report. However, the 1983 summary for Missouri is displayed here to illustrate how the state has performed in relation to the national 1979 figures.

It should be noted that the national data reported in Figure 25 encompass all types of higher education institutions while the Missouri data apply only to public colleges and universities. It is unclear what differences might exist in a national comparison of only public institutions.

As can be seen in Figures 25-27, it would appear that the statewide data for Missouri vary from the national higher education employment figures in some significant ways. In general, Missouri institutions have relatively more faculty and relatively fewer administrative and support staff of all types than the national average. The number of women employed in Missouri public higher education lags the national average only slightly, though there would appear to be some significant differences in distribution among employment categories. Minority employment in Missouri public higher education lags national averages significantly but there are also significant differences between the nationwide average minority population and that of Missouri.

As Figure 25 and 26 illustrate, the faculty comprised 37.4 percent of the staff in Missopri public colleges and universities in 1979 as compared to a national average of 30.9 percent. Missouri had a relatively smaller percentage of all other categories of employees except skilled craft and service and maintenance workers. By 1983 the Missouri percentage of service and maintenance employees had been significantly reduced, the percentage of executive/managerial employees and professional nonfaculty had increased, and the percentage of faculty was essentially unchanged.

This tends to corroborate the Coordinating Board's Master Plan Assessment Report Number Six which suggested that, while Missouri public colleges and universities have less to spend than their peers, they focus their resources on instruction. Conversely, of course, Missouri institutions are able to provide relatively less in the way of support services and institutional maintenance.

Figures 25-27 suggest that Missouri public colleges and universities have lagged slightly behind the national average of institutions of higher education in the employment of women. However, while Missouri's percentage of women staff varies only slightly from the national average, women tend to be somewhat more heavily concentrated in those positions which tend to pay less. Between 1979 and 1983 some notable progress was made, particularly in the fastest growing category of executive, administrative, and managerial staff.

The percentage of minority employees at Missouri public institutions of higher education was considerably below the national average in every category of employment and in total. However, in terms of the percentage of total employees of minority heritage, both the national average and the Missouri percentage are close to the percentages of minorities in the respective populations. Nationally the percentage of the population which is nonwhite was about 17 percent in 1980 while in Missouri the figure was 11.6 percent.

Nevertheless, while some notable progress was made between 1979 and 1983 in Missouri, minorities continue to be significantly underrepresented among executive and managerial, professional nonfaculty, and faculty employees.

FIGURE 25

SUMMARY AND OBSERVATIONS

In general it would appear that Missouri's public institutions, while lagging national trends somewhat, have closely paralleled these trends in staff employment. This observation is not particularly comforting, however. There is much which remains to be done to provide equal employment opportunity within institutions of higher education. In many respects the job has really only begun. In the face of static to declining enrollments and continuing or increasing financial constraints, it is unlikely higher education employment will grow in the coming decade. As has been illustrated in this report, the greatest gains in employment equity have tended so come where there has been staff growth. It will get harder rather than easier to improve the record.

Another issue raised by this report is the smift in staff categories from nonprofessional support staff to professional nonfaculty and administrators. While even the 1983 percentage of executive and managerial staff in Missouri was below the 1979 national average, the shift still seems somewhat curious in view of financial constraints. The trend would seem to suggest additional analysis which is beyond the scope of this report.
